## Table of Contents

<b>1. On the synthesis of the planetary gearset with non-equiaangular parallel double satellites .....</b>	<b>9</b>
1.1. Introduction .....	9
1.2. The problem formulation.....	12
1.3. Mounting of planetary pinions in a non equiaangular disposal.....	13
1.4. Conclusions .....	14
REFERENCES .....	14
<b>2. Pattern making simplification for the real power circulation in planetary gearsets .....</b>	<b>15</b>
2.1. Introduction .....	15
2.2. Basic premises and correlations .....	15
2.3. Presentation of the proposed algorithm, applied to a numerical example .....	19
2.4. Conclusions .....	22
REFERENCES .....	23
<b>3. Analysis of the efficiency and real power circulation in a planetary gearbox using the simplified modelling method .....</b>	<b>24</b>
3.1. Introduction .....	24
3.2. Basic premises and correlations .....	24
3.3. Applying the simplified modelling algorithm on a numerical example, for a Simpson type gearbox.....	28
3.4. Conclusions .....	31
REFERENCES .....	31
<b>4. On the velocities and torques from the Vaucanson planetary transmission.....</b>	<b>32</b>
4.1. Introduction .....	32
4.2. Structural characterization.....	32
4.3. Modeling of the reduced speeds .....	33
4.4. Modeling of the reduced moments .....	35
4.5. Conclusions .....	37
REFERENCES .....	38
<b>5. On the power circulation and efficiency from the Vaucanson planetary transmission.....</b>	<b>39</b>
5.1. Introduction .....	39
5.2. Modeling of the power circulation and efficiency.....	39
5.3. Conclusions .....	40
REFERENCES .....	44

<b>6. Philogenetic outlook on the planetary speed reducers with one sun gear .....</b>	<b>45</b>
6.1. Introduction .....	45
6.2. Philogenetic outlook by means of representative examples .....	46
REFERENCES .....	54
<b>7. Philogenetic overview on the speed reducers derived from planetary gearsets with 2 sun gears .....</b>	<b>55</b>
7.1. Introduction .....	55
7.2. Philogenetic outlook by means of representative examples .....	55
REFERENCES .....	60
<b>8. On the optimization of the efficiency for simple planetary reducers .....</b>	<b>61</b>
8.1. Introduction .....	61
8.2. Examples of planetary reducers with one and two sun gears .....	61
8.3. Comments and conclusions .....	65
REFERENCES .....	71
<b>9. On the modelling of technical products design process .....</b>	<b>72</b>
9.1. Modelling of a technical product life cycle .....	72
9.2. Modelling of a product design .....	74
9.3. Conclusions and developments .....	78
REFERENCES .....	81
<b>10. On the conceptual design modeling of the technical products .....</b>	<b>82</b>
10.1. Introduction .....	82
10.2. Conclusions of the comparative analysis .....	82
10.3. A generalized variant of the conceptual design algorithm .....	83
10.4. Conclusions .....	89
REFERENCES .....	91
<b>11. On the conceptual design of a technical product: a case study .....</b>	<b>92</b>
11.1. Introduction .....	92
11.2. On the requirements list .....	92
11.3. Identification of the motor-reducer's function .....	93
11.4. Detailing the motor-reducer's function .....	94
11.5. Generation of solving structures .....	94
11.5.1. Generation of the solving structural variants .....	97
11.5.2. Establishment of the solving structures .....	97
11.6. Conclusion .....	103
REFERENCES .....	104
<b>12. On the conceptual synthesis of a new cycloid planetary reducer .....</b>	<b>105</b>
12.1. Introduction .....	105
12.2. New variants of cycloid planetary reducers with a central wheel .....	106
12.3. Evaluation of the generated variants and determination of the conceptual solution .....	110

12.4. Conclusion.....	112
REFERENCES .....	112
<b>13. On the geometrical optimization of the new planetary cycloid reducer with rollers.....</b>	<b>113</b>
13.1. Introduction .....	113
13.2. The geometrical optimization of the cycloid gear pair with rollers.....	114
13.3. Conclusions .....	119
REFERENCES .....	119
<b>14. Kinematical and dynamic aspects of the new cycloid planetary reducer .....</b>	<b>120</b>
14.1. Introduction .....	120
14.2. On the geometrical optimization of the cycloid gear pair with rollers .....	121
14.3. Dynamic modelling of the cycloid planetary reducer.....	122
14.4. Conclusions .....	126
REFERENCES .....	126
<b>15. On the efficiency of the new cycloid planetary reducer.....</b>	<b>127</b>
15.1. Introduction .....	127
15.2. The testing stand.....	129
15.3. Experimental planning.....	130
15.4. Conclusions .....	136
REFERENCES .....	137
<b>16. Kinematical features of some speed increasers from wind and hydro systems.....</b>	<b>138</b>
16.1. Introduction .....	138
16.2. New solutions of planetary speed increasers .....	139
16.3. Structure and kinematics of planetary speed increasers .....	140
16.4. Conclusions .....	144
REFERENCES .....	146
<b>17. Features of a complex speed increaser used in wind turbines.....</b>	<b>147</b>
17.1. Introduction .....	147
17.2. Structural and kinematical aspects .....	148
17.3. Dynamic aspects.....	153
17.4. Conclusions .....	155
REFERENCES .....	155
<b>18. Dynamic features of a simple speed increaser usable in wind and hydro systems .....</b>	<b>156</b>
18.1. Introduction .....	156
18.2. Dynamic aspects.....	156
18.3. Comments and conclusions .....	159
REFERENCES .....	163

<b>19. On the use of the cycloid speed reducer as increaser in R.E.S.</b>	
<b>applications .....</b>	<b>164</b>
19.1. Introduction .....	164
19.2. Comparative analysis.....	165
19.3. Conclusions .....	168
REFERENCES .....	168
<b>20. On the use of a cycloid speed reducer with double satellite as speed</b>	
<b>increaser .....</b>	<b>169</b>
20.1. Introduction .....	169
20.2. The analysis of the transmission as speed reducer .....	171
20.3. The analysis of the transmission as speed increaser.....	172
20.4. Comparative analysis.....	174
20.5. Comments and conclusions .....	174
REFERENCES .....	179
<b>21. The dynamic behavior of a bimobile planetary gear .....</b>	<b>181</b>
21.1. Introduction .....	181
21.2. The stationary stage motion and the work point.....	181
21.3. The motion study in transitory stage .....	184
21.4. Conclusions .....	185
REFERENCES .....	188
<b>22. Conceptual aspects of a bimobile speed mechatronic variator .....</b>	<b>189</b>
22.1. Introduction .....	189
22.2. The characteristic entities modeling .....	191
22.3. Numerical example.....	195
22.4. Conclusions .....	197
REFERENCES .....	198
<b>23. Dynamic aspects of the bimobile speed mechatronic variator .....</b>	<b>199</b>
23.1. Introduction .....	199
23.2. The variator dynamic modeling.....	201
23.3. The algorithm for the adjustment of stationary quantities .....	204
23.4. Conclusions .....	207
REFERENCES .....	207
<b>24. Dynamic behavior of the mechatronic speed variator .....</b>	<b>208</b>
24.1. Introduction .....	208
24.2. The dynamic model .....	208
24.3. Numerical simulations.....	212
24.4. Conclusion.....	214
REFERENCES .....	217
